- 1) This table indicates what height of brick can be supported
- 2) The angles are designed to limit the bending stress $F_b = 22,000$ psi ASTM A36 steel
- 3) Maximum deflection limited to $L/600$
- 4) Lateral support assumed in all cases
- 5) For angles not laterally supported, allowable load must be reduced
- 6) For angles subjected to torsion make special investigation
- 7) Table produced per Brick Institute of America Technical Note 31B
